

- For Low Balance, High Balance, Large Deposit, and Large Withdrawal alerts, users will be able to set the threshold that triggers the alert when the push notification is turned on.
- For Payment Due, Payment Overdue, and Maturity Reminder alerts, users will be able to set how many days before the due date the alert should be sent.
- For Balance Update alert, users will be able to toggle the push notification on/off. The frequency of the alert will default to once a week on Friday.
- If user has already set up the alert in online banking with a different frequency, the push notification will be sent based on the existing frequency. To change the frequency, user must log into his or her online banking account.

- If the user has previously setup banking alerts within online banking, existing alerts will be displayed on the push notification settings page.
- If your financial institution allows default alerts to be set, push notification will be turned on by default for the user's existing alerts.
- If users does not have any existing banking alerts, push notification will be turned on by default when user enables alerts in the app.
- The following 4 types of alerts are turned on by default:
 - Low Balance alert for their checking account for \$100
 - Large Withdrawal alert for their checking account for \$100
 - Large Deposit alert for their checking account for \$100.
- Balance Update alerts are sent weekly.
- If your financial institution does not allow default alerts to be set users, users will need to manually turn on push notification for individual alerts on the push notification Settings page.
